lalitpur, Nepal

SUMMARY

Years of hands-on experience using Linux operating systems like Fedora and Ubuntu, with strong fluency in command-line operations. I have a solid understanding of TCP/IP, DNS, DHCP, VPN, and subnetting, as well as practical experience with Docker and VMware for virtualization. My technical skills include proficiency in Bash, PowerShell, and Python for scripting and automation, along with experience in Git, SQL, and Python for version control and database management. I am passionate about troubleshooting and resolving system issues efficiently, and I bring strong communication skills that enable effective collaboration within teams.

KEY COMPETENCIES

Linux Operating System
SQL
Git

Python And Django
Data Analysis

Strong interpersonal skills
Proactive and self-motivated

PROJECTS

The Medicare

FEB 2020

"The Medicare" is the software project developed in 2020 with the motive to aid for the patients of mental health. The patients could able to get health counselor (medical personal or other trained individual) anonymously . The software was developed using html, css , python . The functionality was implemented in django framework.

Facial Authentication System

2022 - 2023

Web Application that uses the features of machine learning to recognize the individual and users are allowed to login to the system using their face. The final project was implemented in Django framework.

Deepfake Detection System

2023 - 2024

Developed a deepfake detection system using generative AI and machine learning technologies. Applied advanced algorithms to identify and mitigate the risks associated with manipulated media content. Project involved training models, data analysis, and successful implementation of detection strategies.

EDUCATION

Bachelor in Computer Engineering

Kantipur Engineering College(2019-2024)
Dhapakhel, Lalitpur

Higher Education

Capital College and Research Center
Koteshwor, Kathmandu

Secondary Level Education

Shree Krishna Ratna Ganga Ma Vi
Chautara, Sindhupalchok

EXTRACURRICULAR ACTIVITIES

Founder Member of Tinybits Foundation

Former President - CCRC IT CLUB

President at Shine Saving and Credit Co-operation

Founder of MetEntrepreneur

AWARD AND CERTIFICATIONS

Best Student Award

Shree Krishna Ratna Ganga Ma Vi (2017)

Tribhuwan University (Institute Of Engineering)

Software Fellowship (LOCUS 2020)

Software Development Training using Python and Flask Framework

Kantipur Engineering College

LITE technical exhibition 2020

Kantipur Engineering College

Python with Data Science(2022)

"Python with Data Science" , A training organized by Research, Training and Consultancy Division(RTCD), Kantipur Engineering College in 2022

Kantipur Engineering College

Data Analysis(2023)

A Comprehensive training for enhancing professional skill of working with real world project.

Research Paper On Deepfake Detection

july - 2024

Deepfake technology, which uses AI to create and manipulate realistic synthetic media, threatens digital content's trustworthiness. This study presents a deepfake detection approach using a convolutional vision transformer (CViT), a hybrid model combining convolutional neural networks (CNNs) and vision transformers (ViTs). A 20-layer CNN extracts features from face images, and a ViT classifies them as real or fake. The study uses MTCNN for face detection and alignment, enhancing accuracy and efficiency. Evaluated on the FaceForensics++ dataset with 15,800 images from 1,600 videos, the method achieves 92.5% accuracy and an AUC of 0.91. Gradient-Weighted Class Activation Mapping (Grad-CAM) visualizes image regions crucial for decision-making. This method effectively distinguishes genuine and manipulated videos, enhancing media authenticity and security.
